

The following is a complete listing of all claims in the application, with an indication of the status of each:

Listing of claims:

- 1 1 (Original). A relay apparatus comprising:
 - 2 external connection interface means to which a plurality of
 - 3 communication means are connected and which individually interfaces with
 - 4 the communication means; and
 - 5 common control means which is commonly provided for the plurality
 - 6 of communication means and controls to perform communication by using
 - 7 one of the plurality of communication means connected to said external
 - 8 connection interface means in accordance with operation by a user.

- 1 2 (Original). An apparatus according to claim 1, wherein said common control
 - 2 means comprises
 - 3 call control means for acquiring, from a communication terminal
 - 4 connected to said external connection interface means, unique communication
 - 5 information including communication partner information and log information
 - 6 used for communication through the communication terminal,
 - 7 a database storing communication information, and
 - 8 database management means for classifying communication
 - 9 information according to communication partners and collectively managing
 - 10 the information.

- 1 3 (Original). An apparatus according to claim 2, wherein said common control
 - 2 means comprises
 - 3 window display means for displaying various kinds of information
 - 4 about communication, and search means for retrieving communication
 - 5 information about a communication partner from said database, and

P15454-A

10/621,583

01070071AA

6 said call control means displays the retrieval result obtained by said
7 search means on said window display means.

1 4 (Currently amended). An apparatus according to claim 2, wherein said
2 database stores termination propriety condition information set for each
3 communication partner, and

4 said common control means further comprises response determination
5 means for, if during speech communication through one of the plurality of
6 communication means, an incoming call is received through another
7 communication means, determining the propriety of responding to the
8 incoming call on the basis of termination propriety condition information
9 about a communication partner, from said database, with which the speech
10 communication is being performed.

1 5 (Original). An apparatus according to claim 1, wherein said external
2 connection interface means comprises at least one of terminal interface means
3 for interfacing with a terminal and line interface means for a line.

1 6 (Original). An apparatus according to claim 5, further comprising relay
2 means for relaying/connecting said terminal interface means and said line
3 interface means to said control means.

1 7 (Original). An apparatus according to claim 1, wherein the communication
2 means comprises at least one of a portable terminal and a communication line,
3 and performs various kinds of communication.

1 8 (Currently amended). An apparatus according to claim 8 1, wherein the
2 communication means performs at least one of speech communication,
3 electronic mail communication, and image communication.
